

Statusreport SEL 11/3

We have met with the customer last Wednesday (3.3) and established three more dates for further introduction and insight into their development process.

- 8.3 introduction development process and jira
- 10.3 introduction datamodel and code structure
- 24.3 plan for the second iteration

So far we have been given a brief introduction to the code base and how to set up our systems for development. We have also learned about their internal procedure of tracking and planning the code development through the help of Jira.

Further steps will include preparing and setting up our own systems to be ready for development in order to familiarize ourselves with their code and the language.

Marko Cikovic has prepared and finished our first presentation for the 11.3 in time.

Time spent for the task approx. 2.30h.

Our project is well on its way.
