Statusreport SEL 25/3

The issues some of our members had with setting up their systems have been resolved and everyone is ready for development. We have met with the customer on the 24th of march and have received our first stories to complete. The stories must be partially or fully completed until the 12th of April, where we will plan our third iteration and receive further stories to work on.

As we have received our stories only the day before the weekly delivery, we have not been able to invest time in completing them. Thus our members are not yet able to give an estimation on the required time needed in order to complete their tasks. Our members instead have used their time this week to complete their setups and get more acquainted with the required programming languages.

	Luca	Severin	Raphael	Marko	Marco
Learning required programming languages	-	3 hours	-	3 hours	6 hours
Environment setup	9.5 hours	completed last week	6 hours	2.5 hours	2 hours

As everyone's system now properly works, we are back on our planned time schedule. The project is well on its way.
